IRKUTSK AIRFRAME PLANT NO 39, IRKUTSK, USSR

25X1A Irkutsk Airframe Plant No 39 (BE No [REDACTED]) is located 5 nautical miles (nm) northwest of the center of Irkutsk, USSR, at 52-25-10N 104-04-10E (Figure 1). The plant is adjacent to Irkutsk Airfield Northwest (BE No [REDACTED]) and is served by major roads and by rail spurs.

25X1A When first observed on Mission [REDACTED], the plant's facilities and available floorspace could not be accurately determined because of the poor quality of the photography. Later photography of good quality from Mission [REDACTED] (Figure 2) shows the plant containing approximately 2,098,200 square feet of floorspace, with a new addition

to the subassembly section under construction (item 3, Figure 3). This new addition will contain approximately 187,600 square feet of floorspace, which will increase the plant's total floorspace to approximately 2,285,800 square feet in the near future.

Irkutsk Airframe Plant No 39 has been reported to produce transport-type aircraft. This is supported by the presence of five CUB on the parking apron adjoining the entrance to the final assembly hall (item 1, Figure 3). The presence of an undetermined number of fighter-type aircraft at the adjacent airfield could indicate some production of fighters. The final assembly hall is sufficiently large

to accomodate two production lines.

Irkutsk Airfield Northwest, which serves the plant as a test and flyaway field, has a serviceable northwest/southeast concrete run-

way measuring approximately 8,200 by 330 feet.

The runway is served by a concrete parking apron and a taxiway which connects with the airframe plant.
